

```
1: README
2:
3: Computer Science E-259
4:
5:
6: OVERVIEW
7:
8: In these directories are two client-server pairs, one that
9: demonstrates Project 4's warehouse and one that
10: demonstrates a tax service. Each's usage is documented below.
11:
12:
13:
14: TAXES
15:
16: To access TaxService.jws as a web service, simply
17: do the following.
18:
19: 1. Spawn Tomcat from within examples11/server/, after
20: specifying in examples11/server/conf/server.xml the
21: ports desired.
22:
23: 2. Execute the following command (which, unfortunately, wraps onto
24: a second line) from within examples11/clients/taxes/.
25:
26:     java org.apache.axis.wsdl.WSDL2Java
27:     "http://$ICEBOX.fas.harvard.edu:n/taxes/TaxService.jws?wsdl"
28:
29: 3. Edit the first line of
30:     examples11/clients/taxes/TaxClient.java so that
31:     the appropriately named package is imported. The first line of
32:     that file, at present, is
33:
34:     import edu.harvard.fas.icel.taxes.TaxService_jws.*;
35:
36:     because we whipped up this demo on icel.fas.harvard.edu.
37:
38: 4. Execute the following commands from within
39:     examples11/clients/taxes/.
40:
41:     javac TaxClient.java
42:     java TaxClient
43:
44:     You should see the result of the service's performing the
45:     various calculations specified in TaxClient.java.
46:
47:
48: WAREHOUSE
49:
50: To access Project 4's warehouse as a web service, simply
51: do the following.
52:
53: 1. Spawn Tomcat from within examples11/server/, after
54: specifying in examples11/server/conf/server.xml the
55: ports desired.
56:
57: 2. In another terminal, execute the following command (which,
58: unfortunately, wraps onto a second line) from within
59: examples11/clients/warehouse/.
60:
61:     java org.apache.axis.wsdl.WSDL2Java
```

examples11/

```
62:     "http://$ICEBOX.fas.harvard.edu:n/warehouse/services/Purchasing?wsdl"
63:
64: 3. Edit the first line of
65:     examples11/clients/warehouse/PurchasingClient.java so that
66:     the appropriately named package is imported. The first line of
67:     that file, at present, is
68:
69:     import edu.harvard.fas.icel.warehouse.services.Purchasing.*;
70:
71:     because we whipped up this demo on icel.fas.harvard.edu.
72:
73: 4. Execute the following commands from within
74:     examples11/clients/warehouse/ .
75:
76:     javac PurchasingClient.java
77:     java PurchasingClient
78:
79: You should see the result of the service's application of po-ack.xsl
80: to the empty <PO/> element passed to the service by PurchasingClient.
81:
```

## TaxClient.java

examples11/clients/taxes/

```
1: import edu.harvard.fas.ice1.taxes.TaxService_jws.*;
2: import org.apache.axis.AxisFault;
